>> Entry #1

Monday, March 25th, 2030

That's it! Our planet is saved! I, AXëlle Müüske, with all my team, found a new chemical element that I called "Lycron" (Ly^{119}). It was hidden deep down in our beloved Earth, but thanks to our newest deep-mining technologies, we were able to explore Earth's core where we found an abondance of this new material.

What's so great about Lycron is that it can react with hydrogen, with this simple reaction I discovered :

Note : Indeed, the reaction needs liquid hydrogen, but I don't think it will be an issue

>> Entry #2

Monday, November 5th, 2031

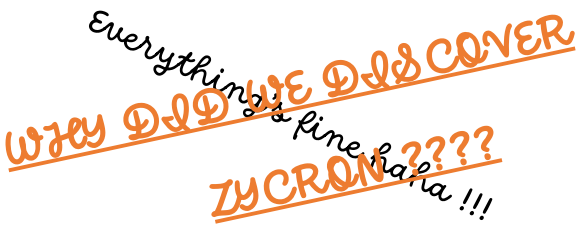

I knew my discovery would be revolutionary! As I planned, Lycron is an abundant and, most importantly, a green source of energy. Now it's used almost everywhere in the world, climate change is already a forgotten issue !

I waited winter to write this entry because I wanted to see how using Lycron is so efficient, even in periods of high energy requirements that are winters for example. Well of course, it appears to be efficient, I'm such a genius !

>> Entry #3

crap carp crap crap……

Don't worry

>> Entry #4

Tuesday, January 1st, 2042

Well hum... maybe I'm not such a genius...

Maybe I really doomed Earth 😓 ?

Look, here's the issue : we discovered an INTERESTING property about Lycron by analyzing... the ozone layer.

Well just look at this following reaction :

$$LyH_{(g)} + O_{3\,(g)} \longrightarrow Ly_{(s)} + O_{2\,(g)} + H_2O_{(g)} \quad (💀)$$

⚠ see, that's the issue ⚠

As one beginner chemist could understand, the death (💀) reaction is destroying the ozone layer ~~that is literally necessary for us to survive on this god damned planet~~

let's not add that it's not very professional 😔

Hopefully this reaction is a very slow process?

I don't know, us scientists have been procrastinating on this topic because, quote, "oh no we're doomed what's the point ??" sob sob...

We're such cowards...

>> Entry #6

Tuesday, June 28th, 2044

I, AXëlle Müüske, now acknowledge that Lycron already destroyed enough of the ozone layer in order to doom humanity, and that I am the one who initiated all of this.

Soon, our bodies will be overwhelmed by UV radiation or other nice gifts the sun will throw at us that we were protected from back when Lycron never was discovered. It might not affect this generation, but surely, by the next one or the one after, it will be the end...

This statement of honesty and guilt is important, because all my [coward] colleagues keep doing the same experiments over and over, hoping that they will obtain some reassuring result, because they're too afraid for accepting their fate. Because I am the one who caused all this bullshit, I never was like them. It's been a while I'm fighting against the people that are literally supposed to be on my side - my "colleagues". The scientific community's becoming crazy, they keep trying to hide our fate to citizens. They even refuse "bad" experiments results; I think they are the ones who corrupted my data from **experiment 498**. That's why there's no record of my next experiments in this journal, I keep them safe elsewhere.

I must convince our community to accept the reality of things, and most importantly, we have to share these facts to governments, so they'll finally stop to use this cursed Lycron !!

Of course, I'm trying all my best to stop this auto destruction of our species, but without any help I'm useless! How can the person who discovered and worked so hard to implement Lycron all over the world could convince, ALONE, that it's actually so dangerous it could cause massive extinction ??

I'm... alone. It's hopeless.

```
>> initializing...
>> AXelle@Home cd data
>> AXelle@Home/data open ./Entry_7.dec
>> error : encrypted file detected - Aborted
>> AXelle@Home/data decrypt.exe ./Entry_7.dec
>> encrypted file - do you want to enter the decryption key (y/n) ? - y
>> decryption key : ***************
>> File being decrypted..... Success
>> Output : ./decrypt/Entry_7.txt
>> AXelle@Home/data cat ./decrypt/Entry_7.txt
```

>> Entry #7

Wednesday, April 24th, 2052

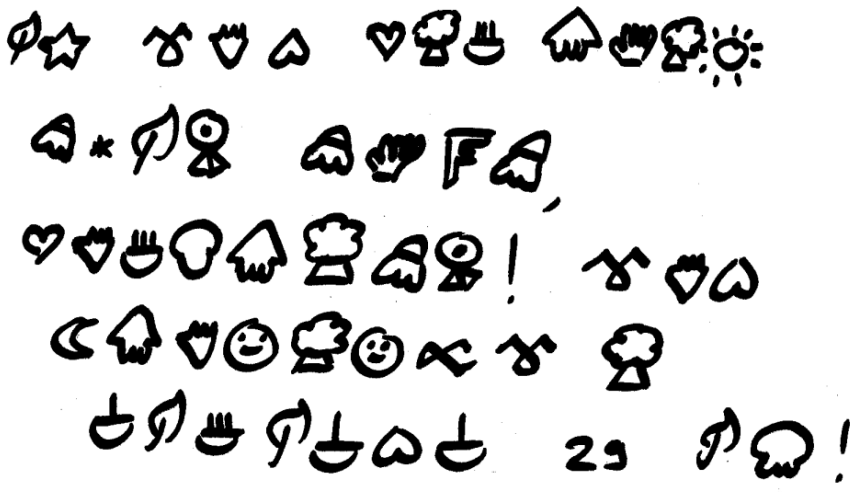

Well, working for the government is really starting to get obnoxious here. At last, I (with the scientific community's help) succeeded in ensuring that every country stops using Ly[119], at least that's what I thought. Some bastards keep murdering the planet, for instance Doonalde Troompp, current president of the USA. Of course, tension rose very fast and now, I think a 3rd World War might happen, everyone is losing control of themselves because of how much we're fucked.

This entry, and many of the following ones, contrary to the others, will be very well secured from any non-authorized reader. It could be very inconvenient if an enemy successfully reads these notes, especially if I'm hired in secret operations for the government. For this reason, I will now write very sensitive data in an "enciphered language" of my own.

Here's the translation table for you authorized folks :

A	B	C	D	E	F	G	H	I	J	K	L
										M	
M	N	O	P	Q	R	S	T	U	V	W	X
											
Y	Z	0	1	2	3	4	5	6	7	8	9
		9	1	3	7	6	5	0	2	4	8

Table 1 - Decipher table

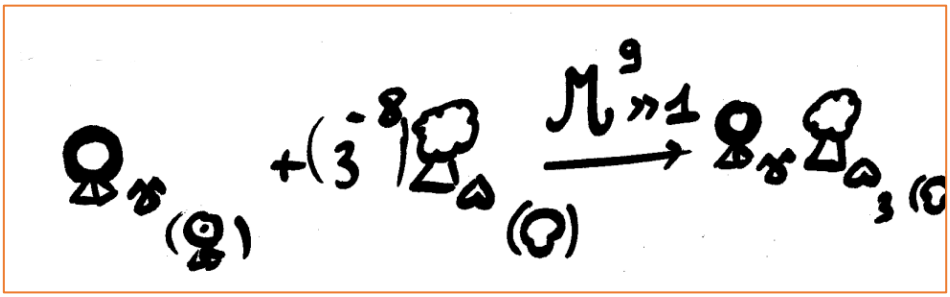

>> Entry #8

Tuesday, May 1st, 2068

The WWIII is indeed occurring, since 2052. Opponents keep attacking us because they want to keep using Lycron, regardless the consequences, because they want to be economically more influent that the other countries that use renewable energy. We figured that a frontal violent response would not solve the conflict, so we're rather trying to [illegible].

What we searched for years is a chemical element that can react with [illegible] in order to [illegible] it, but without endangering Earth, nor human lives (as a secondary objective).

At last, and after many experiments ensuring the safety of the process, we chose the following reaction to be appropriate :

You may think this process will be very expensive, but just look at how few [illegible] we need ! The next step is to craft a [illegible] of [illegible], and throw it on opponents !

The war will end soon...

>> Entry #9

Thursday, January 4th, 2080

Hello everyone, it's been a long time ! Quite some things happened since the last entry. First things first, our project to end the war obviously worked (because it was my idea so of course it was great). After getting rid of this issue, I was immediately committed to another project. Even though I'm starting to get old, my contribution to science was seemingly not about to conclude. Now that everyone accepted that Earth is doomed, we must find a "backup plan", a way to flee our issues (as humanity always does). Project's name's "CONQUEST", the goal is to find another planet to live on, most likely out of our solar system.

Actually, it's been many years that I'm on the project, but the thing is, I'm too tired for this. Fortunately, my daughter, EXolotl, also joined the project and is ready to follow my steps. She's in charge of this journal from now on, and I'm sure she will succeed at finding our redemption, after all she has my blood, so she is at least as great as I am. Before ending this entry, I must express, once again, how I'm sorry for all the trouble I caused to humanity. My last wish is that, somehow, humanity can survive my mistakes...

>> ENTRY #10, I guess ?

Saturday, 20th May, 2102

Okay so hello, it's my first entry in my mom's journal, 18 years after the last one because the team on the "CONQUEST" project is struggling so much that it's hard to notice any actual progress on this hopeless thing. Yeah, I'm kind of salty on this stupid idea initiated by my mom but hey, at least she tried something to repair her mistakes.

Anyway, this CONQUEST thing is a forgotten goal for the Müüske family, 'cause since about 2 years, I work on a project that should really save humanity : the "REPLACE" project. The idea is really simple : rather than searching for an ideal world to live on in outer space, that may not even exist in the first place, we're creating it from scratch ! It will be a virtual world, a sort of metaverse in which YOU, as a being, will be living in. It seems kind of crazy, but at the time I'm writing this entry, the metaverse is already created ! For now, this project is kept confidential, we think the government would not appreciate this and would try to stop us, because they really believe in their stupid CONQUEST thing. Although NEW HOME, the metaverse, is almost ready to be published. We just need to find how to make this world "real", how can people really enter this world ? We need a little more time...

```
--------------------------------------------------------------------------------
>> initializing
>> EXolotl@Home decryptv4.exe ./data/Entry_12.dec
>> file encrypted - enter decryption key (y/n) ? - y
>> decryption key : ****************************
>> Success - output @ "./data/Entry_12.txt"
>> EXolotl@Home cat data/Entry_12.txt
```

>> ENTRY #12

Saturday, 15th August 2116

The metaverse is a success. Many people trust this way of redemption, and now our terminals, the gates between our world and the metaverse, spread all around the world, are carrying many SOULS in their storage. Honestly, this situation, while being an accomplishment of what I worked on for all these years, is still very oppressing. I can feel the weight of all these SOULS that are gathered in such a vulnerable place that are our metaverse terminals. Of course, we protected the SOULS from being shattered if a terminal ceases to function properly (the data is transferred to the closest terminal, which usually works so long that the bodies the SOULS are attached to are alive), but we're still kind of vulnerable to cyberattacks.

For the moment, the only thing cybercriminals managed to do is to kick (a few) people out of the metaverse, which again, is not usually an issue so long that the kicked-out person's body is still alive. Regardless, this shows the potential danger of living inside this world, and how chaotic it could become when all the bodies attached to the SOULS will be destroyed by all the radiations threw on these. If a massive cyberattack happens then, I may feel as guilty as AXëlle felt back when she discovered the dangers of Zycron.

Obviously, all our research is focused on this peculiar issue, but for now there's not any significant progress. A team is charged of making this issue as less known as possible among the meta-population (population of the metaverse), and they seem to do a great work since nobody's really freaking out right now.

```
>> initializing
>> Xhara@Home decryptv4.exe ./data/Entry_14.dec
>> file encrypted - enter decryption key (y/n) ? - y
>> decryption key : **********
>> Success - output @ "./data/Entry_14.txt"
>> Xhara@Home cat data/Entry_14.txt
```

>> Final Entry

2122

This time this is χhara speaking. My mom was too oppressed by the recent events to continue to update this journal. She asked me to keep tracks of what's happening as she did, and as grandma did, but I think it's best for the Müüske family to finish this once and for all. Still, I think that all the future people reading these lines have the right to understand all of what happened and will happen next.

After the hackmageddon, people really gave up this world. All the people who worked on this project received many insults and criticism, my mom being excluded from this since she was, and still is, undercover. Regardless, she took it all personally, and really struggles to bear all of this.

Some people took the leadership among those who stayed in the metaverse, and now we're the "UNDERDOGS". We keep upgrading the metaverse, especially regarding cyberattacks, in order to make a comeback when it will be the time. For now, we must hide from the government, even more than before.

As for myself, I was offered the same jobs as my mom back at her time, the Müüske family reputation still being so good. It's helpful to have people as myself, for the UNDERDOGS, to keep surveilling the government, but unfortunately the CONQUEST department is usually not very aware of what's prepared against the metaverse. At least I can ensure all the UNDERDOGS that they fight for a great cause, since I know how CONQUEST still is and always will be a failure.

I can't know what will happen in the following years, but it will surely determine If humanity can have its (not so deserved) redemption or not. Obviously, I'm convinced that the metaverse is the only way to go, but it's sadly not most of people's mindset right now...

I hope that any person reading all these entries now has a better understanding of what are the events that lead to this current situation, and I hope that the world they're living in by their time is better and more peaceful.

Best wishes, χhara Müüske

Note to self: If everything goes as planned, I should make all this journal accessible for everyone when the metaverse can finally exist publicly.
